

# Adiummeetie

by kremalicious | Matthias Kretschmann

[www.kremalicious.com](http://www.kremalicious.com)

## What's this?

Replacement icon for the popular Mac IM client [Adium](#) following the style of atebit's [Tweetie for Mac](#) icon.

The icon comes in various formats (iContainer, icns, png) in sizes from 512px-16px and as an Adium dock icon package. This icon package uses some more icons (just 128px each) for the different states of Adium (online, offline, alert etc.) and includes the application icon too.

## Usage

Just double click the Adiummeetie.AdiumIcon file and the dock icon gets installed automatically. Then you can select the icon in Adium's preferences under Appearance > Dock Icon from the drop-down menu. After this the icon should be ready as your new Adium icon both in the Dock and in your Applications folder.

The icon is free for your personal use and I hope you'll enjoy it. If you do, don't forget to [spread the word via Twitter](#) and all your other favorite social media sites.
